Preface

Overview

This document is intended to introduce each module of the mediaserver application.

Product Version

Chipset	Kernel Version
RV1109	Linux 4.19
RV1126	Linux 4.19
RK1808	Linux 4.4
RK1806	Linux 4.4

Intended Audience

This document (this guide) is mainly intended for:

Technical support engineers

Software development engineers

Revision History

Date	Version	Author	Change Description
2020-04-28	V0.0.1	Vicent	Initial version
2020-09-03	V0.0.2	Ruby	Update the company name and document format

Contents

Rockchip Mediaserver Introduction

1. Overview
 - 1.1 Application Introduction
 - 1.2 Usage
2. Code Modules Introduction
 - 2.1 Directory Structure
 - 2.2 Configuration Introduction
 - 2.2.1 ipc-display.conf
 - 2.2.2 Nodes that Record the Sequence of Arrangement and Combination Between Pipes
 - 2.2.3 Nodes that Record the Sequence of Arrangement and Combination Between Flows
 - 2.2.4 flow_index Parameter
 - 2.2.5 Flow Name
 - 2.2.6 Flow Parameter
 - 2.2.7 Stream Parameter

1. Overview

1.1 Application Introduction

Mediaserver comes with the concept of pipe, configures and reorganizes the media streams of single or multiple channels, and provides IPC communication interfaces, which can interact with web and other interfaces. Developers can realize any arrangement and combination of the following functions through simple configurations:

1. Text stream reading, camera device collection, audio device collection.
2. Audio/video frequency encoding.
3. rtsp/rtmp/Alibaba Cloud streaming, cloud intercom function, picture upload.
4. Video file recording, taking photos, and audio playback.
5. Support filter plug-ins such as rockface, rockx, rga, etc.
6. Can interact with the web

1.2 Usage

`mediaserver [-c config] [-d / -D] [-s / -S] [-h]`

-c: specify the path of the configuration file

-d: indicates that dbserver is not used

-D: means to use the default configuration in dbserver

-s: indicates that dbus is registered on the system bus

-S: indicates that dbus is registered on the session bus

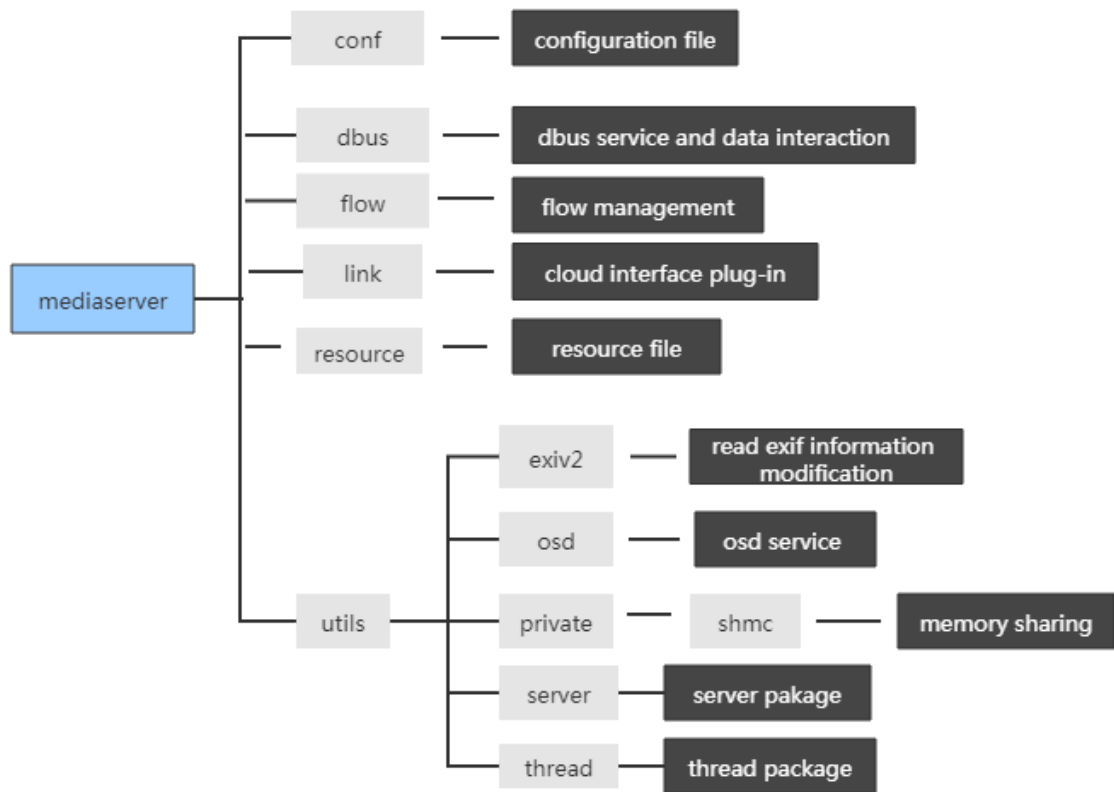

Examples:

Use IPC products with screen: `mediaserver -c /oem/usr/shared/mediaserver/rv1109/ipc-display.conf`

Use IPC products without screen: `mediaserver -c /oem/usr/shared/mediaserver/rv1109/ipc.conf`

2. Code Modules Introduction

2.1 Directory Structure

2.2 Configuration Introduction

The configuration file is in json format.

Pipe represents an independent multimedia channel.

Flow represents a Source/IO/Sink unit in a multimedia channel.

Stream represents the processing method used by Flow.

2.2.1 ipc-display.conf

2.2.2 Nodes that Record the Sequence of Arrangement and Combination Between Pipes

```
1 | Pipe_x: ID of the multimedia channel
```

2.2.3 Nodes that Record the Sequence of Arrangement and Combination Between Flows

```
1 | Flow_x: The ID of the Source/IO/Sink unit in the current multimedia  
   | channel  
2 | flow_index: Record flow type, stream type, upper and lower flow name  
3 | flow_name: record the flow name  
4 | flow_param: record flow parameters  
5 | stream_param: record stream parameters
```

2.2.4 flow_index Parameter

```
1 | fix_resolution: Whether to fix the resolution and not be changed by the  
   | database  
2 | flow_index_name: flow name and ID, to prevent multiple flows of the same  
   | type in the current pipe  
3 | flow_type: flow type  
4 | stream_id: stream ID: 0: main stream; 1: sub stream; 2 third stream  
5 | stream_type: stream type  
6 | upflow_index_name: previous flow name  
7 | ...
```

2.2.5 Flow Name

```
1 | name: current flow name
```

2.2.6 Flow Parameter

```
1 | name: The name of the stream/filter/encoder used by the current flow  
2 | input_data_type: input buffer type  
3 | output_data_type: output buffer type  
4 | ...
```

2.2.7 Stream Parameter

```
1      device: device node
2      frame_num: the number of buffered frames
3      height: high resolution
4      use_libv4l2: Use libv4l2
5      v4l2_capture_type: camera capture type
6      v4l2_mem_type: allocate memory type
7      virtual_height: resolution virtual height
8      virtual_width: resolution virtual width
9      width: resolution width
10     ...
```
