前言

概述

该文档旨在介绍RK3308 DeviceIo库中接口。

芯片名称

RK3308

读者对象

本文档(本指南)主要适用于以下工程师:

技术支持工程师

软件开发工程师

修订记录

日期	版本	作者	修改说明
2019-3-29	V1.0.0	Jacky Ge	初始版本
2020-03-02	V1.0.1	Ruby Zhang	调整文档格式,更新文档名称

RK3308 Key 接口介绍

前言

目录

- 1、概述
- 2、接口说明
- 3、使用示例

1、概述

该代码模块集成在libDeviceIo.so动态库里面,基于input_event输入子系统,对按键的常用需求,包括短按、长按、组合按键等需求做了封装处理,方便开发。

2、接口说明

• Callback函数定义

最基础的Callback回调,会回调每一次按键的up和down事件:

```
1 typedef int (*RK_input_callback)(const int key_code, const int key_value);
```

经过处理的Callback回调,一次短按事件只会回调一次:

```
1 | typedef int (*RK_input_press_callback)(const int key_code);
```

长按事件回调接口:

```
typedef int (*RK_input_long_press_callback)(const int key_code, const
uint32_t time);
```

心跳长按事件回调接口(即满足长按条件后, 若保持按下则定时回调接口):

```
typedef int (*RK_input_long_press_hb_callback) (const int key_code, const int times);
```

组合按键回调接口:

```
typedef int (*RK_input_compose_press_callback) (const char* compose, const
uint32_t time);
```

事务按键回调接口:

```
typedef int (*RK_input_transaction_press_callback)(const char* trans, const
uint32_t time);
```

多次点击回调接口:

```
typedef int (*RK_input_multiple_press_callback)(const int key_code, const int
times);
```

按键模块初始化接口,需要传入一个基础的RK_input_callback 回调函数:

```
1 int RK_input_init(RK_input_callback input_callback_cb)
```

注册按键单击事件回调,按键单击触发:

```
1 - `int RK_input_register_press_callback(RK_input_press_callback cb)
```

为key code按键注册时长为time ms的长按事件:

```
RK_input_register_long_press_callback(RK_input_long_press_callback cb, const uint32_t time, const int key_code)
```

为key code按键注册hb长按事件,每time ms触发一次:

```
int RK_input_register_long_press_hb_callback(RK_input_long_press_hb_callback
cb, const uint32_t time, const int key_code)
```

为key code按键注册times次多击事件(即单击key code times次,两两相差不超过500ms):

```
int
    RK_input_register_multiple_press_callback(RK_input_multiple_press_callback
    cb, const int key_code, const int times)
```

为key_code按键集注册组合事件,key_code按键集同时按下达到time ms触发:

```
int RK_input_register_compose_press_callback(RK_input_compose_press_callback
cb, const uint32_t time, const int key_code, ...)
```

为key code按键集注册事务事件,按顺序依次按下key code集后触发:

```
int
    RK_input_register_transaction_press_callback(RK_input_transaction_press_callb
    ack cb, const uint32_t time, int key_code, ...)
```

按键模块退出,并释放相关资源:

```
1 | int RK_input_exit(void)
```

3、使用示例

```
1 #include <stdio.h>
   #include <string.h>
   #include <unistd.h>
4 #include ux/input.h>
   #include <DeviceIo/Rk key.h>
    static int RK input callback(const int key code, const int key value)
8
9
      printf("_RK_input_callback key_code:%d; key_value:%d\n", key_code,
    key value);
      return 0;
13 static int RK input press callback(const int key code)
14
      printf(" RK input press callback key code:%d;\n", key code);
       return 0;
16
    }
18
```

```
19 static int RK input long press callback(const int key code, const uint32 t
    time)
    {
21
       printf(" RK input long press callback key code:%d; time:%lu\n",
    key code, time);
      return 0;
23
24
    static int RK input long press hb callback(const int key code, const int
25
    times)
26
       printf(" RK input long press hb callback key code:%d; times:%d\n",
    key code, times);
      return 0;
28
29
    static int RK input multiple press callback(const int key code, const int
    times)
32
    {
      printf(" RK input multiple press callback key code: %d; times: %d\n",
    key code, times);
       return 0;
34
3.5
36
    static int RK input transaction press callback(const char* trans, const
    uint32 t time)
38
       printf(" RK input transaction press callback trans:%s; time:%lu\n",
    trans, time);
40
      return 0;
41
42
    static int RK input compose press callback(const char* compose, const
43
    uint32 t time)
44
     printf("_RK_input_compose_press_callback compose:%s; time:%lu\n",
    compose, time);
46
      return 0;
47
    }
48
49
    int main(int argc, char **argv)
      // 初始化input模块
      RK_input_init(_RK_input_callback);
       // 注册单击回调
54
       RK input register press callback( RK input press callback);
       // 注册KEY VOLUMEUP按键的5000ms长按事件
       RK input register long press callback( RK input long press callback,
    5000, KEY VOLUMEUP);
       // 注册KEY VOLUMEDOWN按键的hb长按事件,每500ms触发一次hb
    RK input register long press hb callback (RK input long press hb callback,
    500, KEY VOLUMEDOWN);
       // 注册KEY POWER的双击事件
60
    RK_input_register_multiple_press_callback(_RK_input_multiple_press_callback,
    KEY POWER, 2);
```

```
// 注册KEY_VOLUMEUP->KEY_VOLUMEUP->KEY_VOLUMEDOWN->KEY_VOLUMEDOWN的事务事
                        件
62
                       {\tt RK\_input\_register\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callback(\_RK\_input\_transaction\_press\_callbac
                       lback, 2000, 4, KEY_VOLUMEUP, KEY_VOLUMEUP, KEY_VOLUMEDOWN);
                                // 注册KEY_VOLUMEUP + KEY_VOLUMEDOWN 5000ms的组合按键
63
64
                       {\tt RK\_input\_register\_compose\_press\_callback(\_RK\_input\_compose\_press\_callback,}
                        5000, 2, KEY_VOLUMEUP, KEY_VOLUMEDOWN);
65
66
67
                                      for (;;);
68
69
                                         RK_input_exit();
                                             return 0;
71 }
```
